

Before the TGE: Why GRVT's Team and Tokenomics Converge Into the Strongest Risk & Reward Setup in DeFi Derivatives

Full-spectrum analysis

By Sanpaphat Porntongprasert

March 2026

GRVT [Gravity]

GRVT is a regulated, self-custodial derivatives exchange .Built on ZKsync's Elastic Chain that delivers CEX-grade speed and zero gas fees, while keeping user funds fully on-chain and trade details completely private

GRVT currently holds \$112.7M in Total Value Locked, making it the 5th largest derivative exchange by TVL on Token Terminal

However, the majority of that \$112.7M arrived during the Season 2 incentive campaign, so the real test is whether GRVT retains its ranking after the TGE when incentives end and only genuine believers stay.

Token Allocation

Success Case

	Uniswap	Hyperliquid
Community	21.50%	31%
Team	21.30%	23.80%
Investors	17.80%	0%
Emission	39.40%	38.00%

Community Airdrop [28%]

- Genuinely Above Average Industry norm sits at 15 - 22%

Team + Investors [38.9%]

- The standard safe structure is 1-year cliff + 3 - 4 year linear vest. Hyperliquid's 0% VC allocation remains the outlier that maximized community trust

Future Emissions [33.1%]

- Every DeFi project that has failed with a good product has largely failed because of this bucket being emitted too fast.

On-Chain Perp Volume Analysis

Volume is currently incentive-driven due to the pending token launch

Phase 1 : Volume ramps up

- Aug → Nov 2025 : J-curve inflection
- Sep 2025 inflection: \$2B to \$8B in 6 weeks classic points/airdrop farming trigger
- Team narrative building: GRVT positioning as **"CeFi grade on-chain perps"**

Phase 2 : Volume peaks

- Jan → Feb 2026 : ATH \$14B per week / OI simultaneously peaks at \$500M

Phase 3 : Volume softens

- Feb → Mar 2026 : -38% from ATH
- Volume declining but OI holding at \$400-450M sticky capital remains, mercenary exits happened

Go-to-Market & Post-TGE Strategy

Critical Path

Aave Yield

TGE Event

CEX listing

Customer Segmentation

	Pain Point	GTM Message	Channel
Institutional	CEX risk / DEX latency	CEX speed / safety	Direct BD
TradFi	DeFi UX Complex	Simple UXUI	Finance Media
CEX User	No Yield on margin	Earn margin while trade	Listing / KOL
DeFi Native	Front - running	ZK Privacy	X / Discord

Priority Order : DeFi Native > CEX User > Institutional > TradFi

Marketing Strategy

Activity	Metric	Weight
Trade	Trading Volume	40%
Trade	Open Interest	15%
Trade	Liquidity Provision	5%
Trade	Liquidations	5%
Deposit	TVL in account & Strategies	15%
Invite	Activity of Direct Referrals	20%

Source: GRVT Docs

Drip Marketing

GRVT does not give you all your points at once. It releases a fixed pool of points every single week, distributed proportionally based on your activity during that week. This forces users to show up and trade every week or lose their share of that week's pool to someone else.

Word-of-Mouth Marketing / Partnership Marketing

The referral program pays 20% of all points generated by invitees permanently. This financially engineers word-of-mouth. Every person you tell becomes a revenue stream, making organic conversation self-interested and persistent.

Marketing Strategy

Scarcity Marketing

GRVT used two time-limited seasons as a classic scarcity marketing tool.

Season 1 rewarded early believers, Season 2 captures the final wave, and the June 30 hard deadline manufactures urgency by making free token earning a disappearing opportunity rather than an open invitation.

Loyalty Marketing

Each tier provides progressively better fee discounts, higher APY, better collateral ratios and cashback. Better customers get better treatment

Ambush Marketing / Tradeshow Marketing

GRVT target audience. By hosting a side event during TBW, GRVT captures that pre-qualified traffic without paying TOKEN2049 main stage prices
